	The Evidence Supporting HR	152
	<i>Claim 1: Retirement portfolios with higher Harvesting Ratios</i> <i>tend to have higher success rates and support higher withdrawal rates</i>	153
	<i>Claim 2: The Harvesting Ratio can be effectively calculated with relatively small</i> <i>amounts of historical data, making it applicable to asset classes with limited histories</i>	159
	<i>Claim 3: The Harvesting Ratio works for modern portfolios,</i> <i>including a diverse set of asset classes</i>	162
	<i>Claim 4: During poor markets, portfolios with higher Harvesting Ratios</i> <i>are generally safer for retirement than portfolios with lower Harvesting Ratios</i>	164
